- Data Application Ecosystems
- Challenges and Recommendations

TUNISIA

Long.: 7° - 12°E,

Lat.: 32° - 38°N

Area: 165 000 km²

Population: 12 Millions

Climate variability

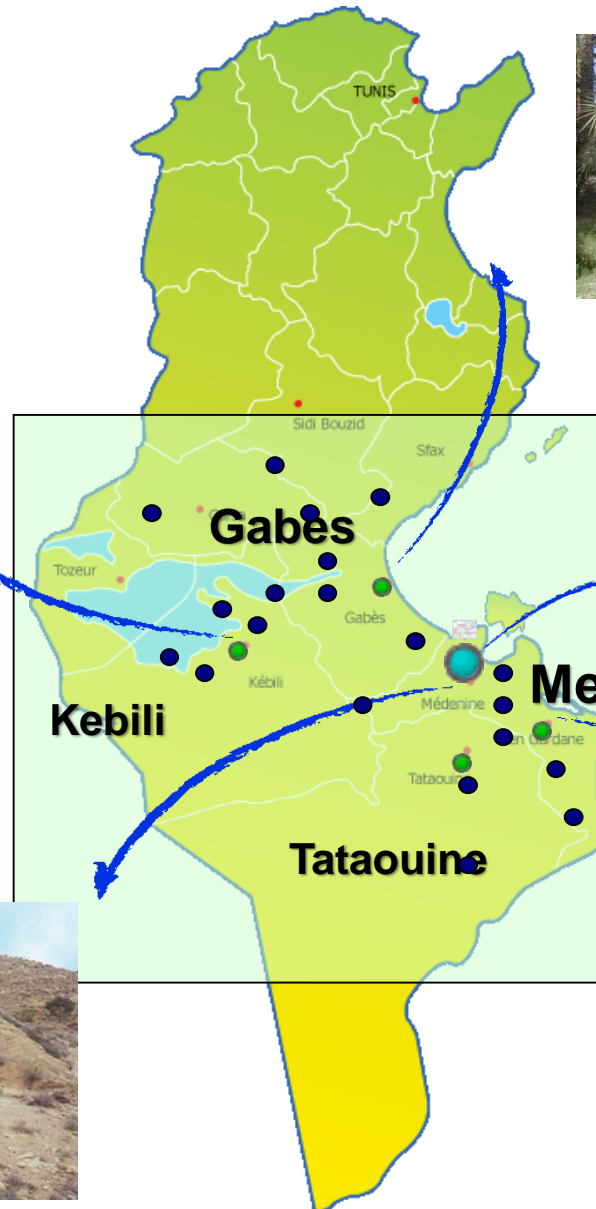

- ✓ Mediterranean Sea
- ✓ Sahara
- ✓ Coastline spans: 1300 km
- ✓ Annual rainfall: (150-1500 mm)

THE INSTITUT DES REGIONS ARIDES (IRA)

<http://www.ira.agrinet.tn/>

- Headquarters
- Regional Stations
- Experimental Stations

THE INSTITUT DES REGIONS ARIDES (IRA)

<http://www.ira.agrinet.tn/>

Socio-economic interactions between local population and their environmental landscapes

Monitoring of wildlife and endangered animal species

Natural resources and **desertification surveillance** at different spatial and resolution scales

Geomatic-based **tools for decision making** in drylands assessment and development

THE INSTITUT DES REGIONS ARIDES (IRA)

<http://www.ira.agrinet.tn/>

Conducting **research on natural resources management** and **combating desertification**

Contributing to **capacity building** in **drylands related topics**

Providing **expertise and assistance** for **development agencies operating in the dry areas.**

World Overview of Conservation Approaches and Technologies

Centre de Recherche Scientifique et Technique sur les Régions Arides

USAID FROM THE AMERICAN PEOPLE

MIDDLE EAST - NORTH AFRICA WATER AND LIVELIHOODS INITIATIVE - WLI

SOUTHERN TUNISIA CONTEXT

- **Monitor and diagnose desertification, vulnerability of eco-agricultural systems.**

- **Establish the relationships between degradation processes, natural ecosystem dynamics, and human activities.**

CONTINUOUS GLOBAL AND REGIONAL MONITORING

300 m – 1 km

Continuous global
indicator monitoring

Selected regional land
quality assessment &
monitoring

10 – 30 m

Land use change
assessment

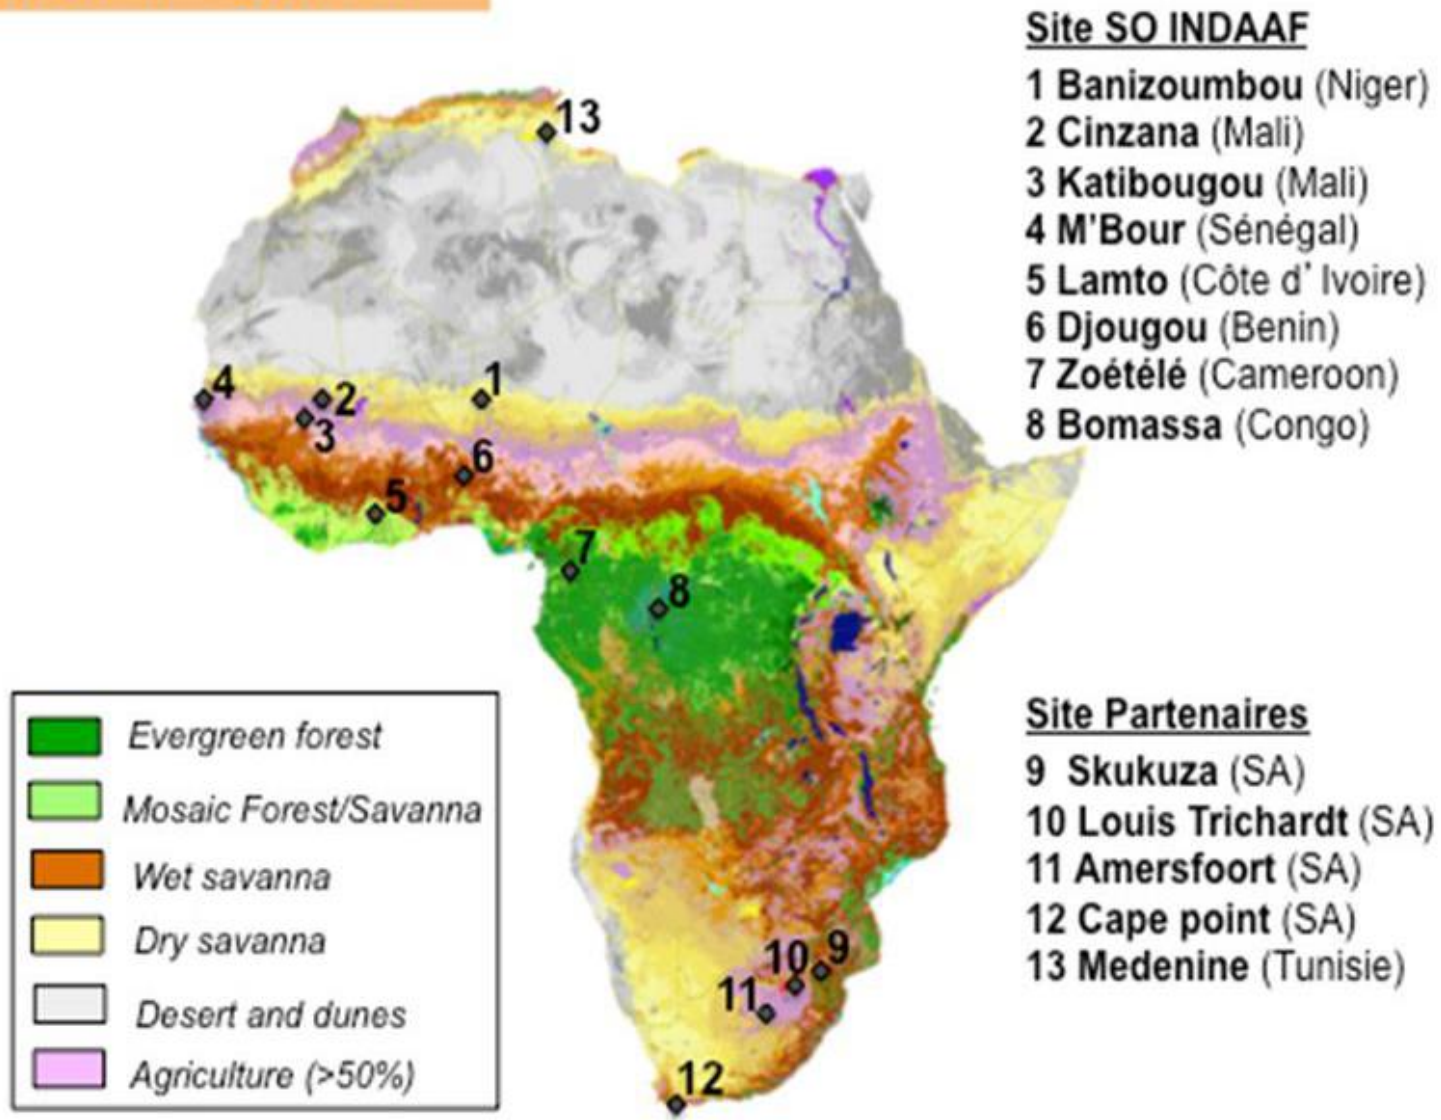

0.5-1 m

Local land surface
properties

CONTINUOUS GLOBAL AND REGIONAL MONITORING

INDAAF Network

International Network to study Deposition and Atmospheric composition in Africa (INDAAF)

TECNOPOLE DU SUD (TPS)

<http://www.technopolesud.tn/>

- Since 2013.
- 4 governorates in southern Tunisia.
- Higher education and research center.
- Area: 40 ha.

Main Goals

- Encourage innovative high-added value companies,
- Support a dynamic socio-economic development in southern Tunisia.

Southern Tunisia Climate Hub (STCH): Towards an Actionable Climate Information

SOUTHERN TUNISIA CLIMATE HUB (STCH)

Climate change is amplifying impacts to agricultural production in Southern Tunisia through increased desertification.

The Southern Tunisia Climate Hub would use a co-production model of stakeholder engagement to develop data-driven information syntheses leading to decision support tool development and technologies that enable climate-informed decision making, enhance resilience and stabilize productivity.

Laurent Guerry

Stakeholder
Engagement
and Co-
production

Mission: develop and *deliver science-based, region-specific information and technologies to agricultural and natural resource managers* that enable climate-smart decision-making and provide assistance for implementation

Climate enabled
decision-making,
Improve
resilience,
Stabilize
productivity

Decision
Support Tools
and
Technologies

Data Driven
Science
Synthesis

Vision: agricultural production and natural resources maintained and strengthened under climate change

Sustainable Development & SDGs

“Development that meets the needs of the present without compromising the ability of future generations.”

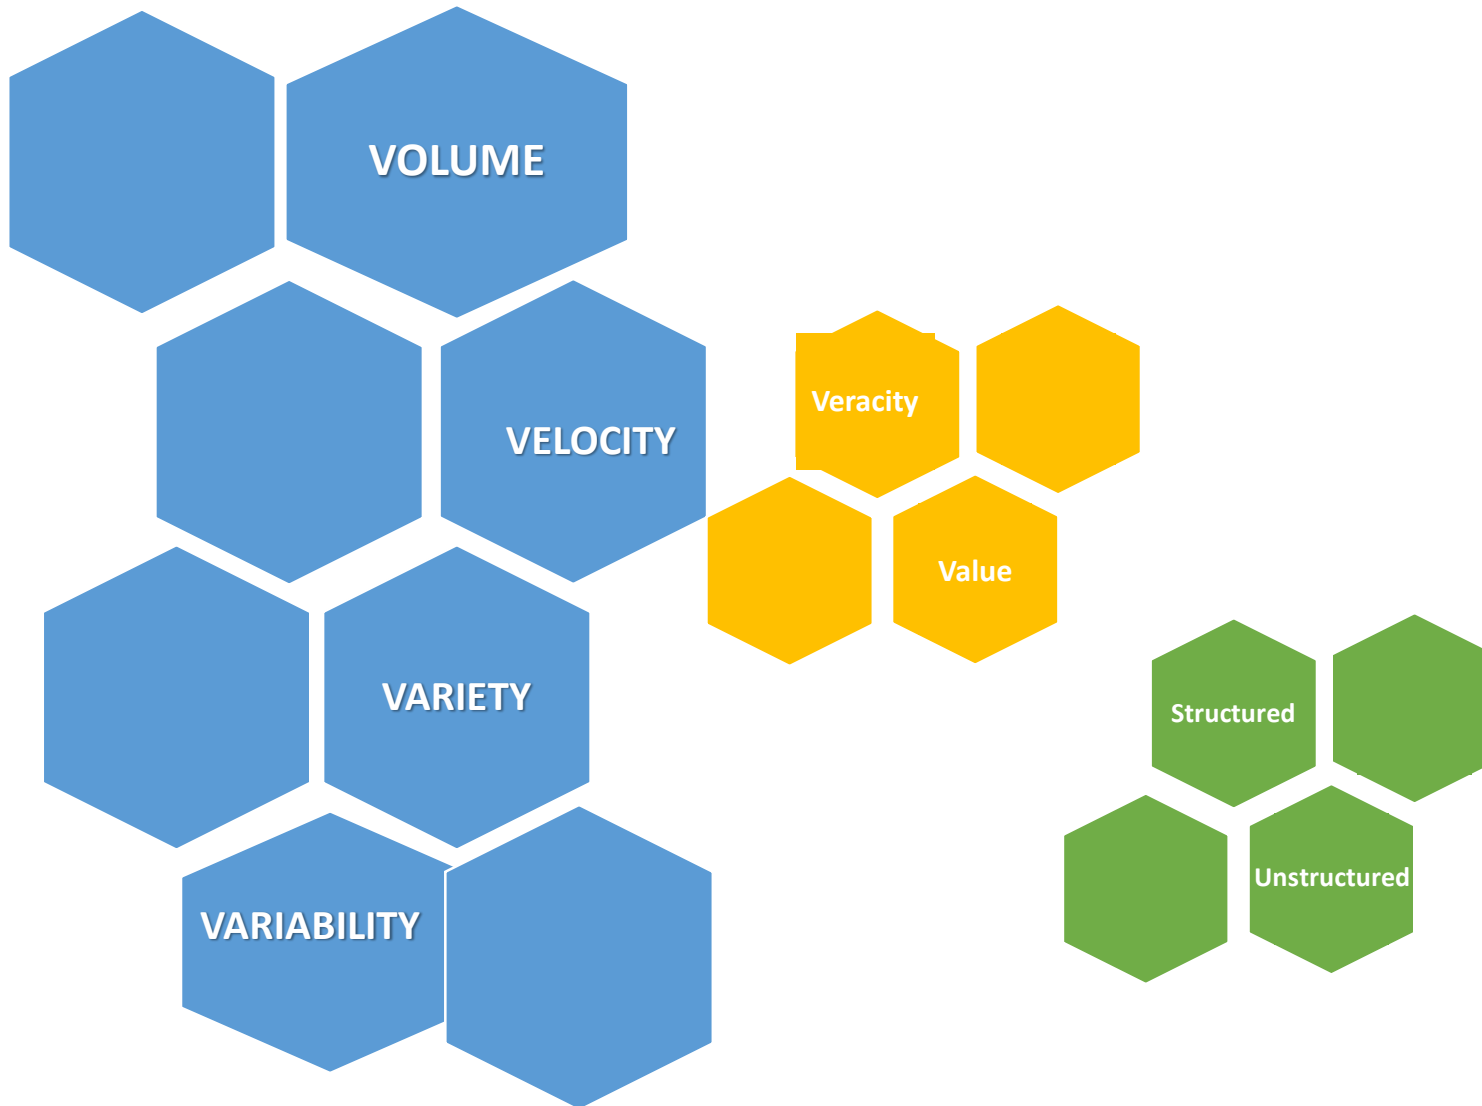

**2030 Agenda for Sustainable Development
17 Sustainable Development Goals**

Space technology supports our common goals to address **global challenges of the 2030 Agenda for Sustainable Development.**

BIG DATA CHARACTERISTICS

DATA ANALYTICS ECOSYSTEMS

Ecosystems

**Stakeholders /
Communities of practice**

Applications

Algorithms & Tools

Data Integration > Feature Extraction > Model Training > Evaluation

Information Extraction > Analysis > Visualization

**Data Management and
Processing
Infrastructure**

Highly scalable and performant

(On Premise, in Cloud, spatially distributed)

Data

**Structured
Unstructured**

EO

**Sensor Networks
Social Media, etc.**

Data (EO Data and the SDGs)

Satellite data availability:

- Since 1960ies / Open Domain: Sentinel, MODIS, Landsat
- Custodian Agencies for the SDGs
- Member States, UNOOSA

Data (Volume and Transfer)

- Where and how to access data
- Trend in moving algorithms to the data (cloud computing)

Challenges & Recommendations

Challenges

- How to choose the right tools?
- Values and Norms (e.g. privacy)
- Many EO machine learning models need to be trained and validated with in-situ measurements
- Digital Divide (esp. considering infrastructure moving to the cloud)
- Human Capacity
- Many initiatives, many projects, overlaps and gaps!

Recommendations

- Communication – find a common language and mutual understanding
- Foster exchange and integration of in-situ and satellite imagery. How remains an open question.
- Data Science at the intersection of Computer Science, Statistics and the respective fields of application
- Collaborate and address the gaps!

Strategic Recommendations

- ***A multi-stakeholder platform for interdisciplinary knowledge exchange;***
- Making ***information*** on space solutions and technologies for land and water-related topics ***discoverable and filterable;***
- ***A capacity-building platform;***
- A portal for ***expert communities, including those from developing countries.***
